# NasaJet® NJ-200
Handheld printer

For advanced users - Double the print height up to 1 inch.

A mobile hand printer is the perfect solution for labelling and marking small to medium sized margins of products or other objects. A handheld printer works quickly, easily and economically. Whether it's simple text output, dates or even consecutive serial numbers or complex QR codes, a handheld printer doesn't need a lot of installation and set-up, but is practically ready to use straight away. Print data is entered and stored directly in the device itself. Output is then automatic, at the touch of a button or via an external sensor.

Technical data NasaJet® NJ-200

CPU	Quad Core 1.4GHz	**Ink type**	Water / Solvent
Touchscreen	4.3" (11cm)	**Battery**	14.8VDC / 2.600mAh
Languages	EN / DE / ZH / ES / FR ...	**Power supply**	240V Input
Print height	0.07-1" (2-25,4 mm)	**Weight**	1.12 Kg (incl. battery)
Resolution	300dpi	**Temperature**	32-100°F (0-38°C)
Print distance	0.07-0.2" (2-5 mm)	**Input/output**	USB / ext. light sensor
Print content	Text / Number / Symbol / QR- & barcode / Date / dyn. data / variable QR-codes / GS1.128		

Advantages

The NJ-200 combines all the advantages of its little brother NJ-100 with twice the print height of up to 1 inch. Of course, it also offers easy operation, the greatest possible freedom from maintenance and economy for efficient use in shipping, warehousing, production or retail.

Applications

Thanks to the use of a wide range of inks, the application possibilities are almost unlimited. Print your data and information on **cardboard, wood, plastic, metal, concrete, stone, polystyrene, rubber, ceramics, textiles or even organic substrates.**
